

- Wall transformer - Provides power to input nodes on the system (PS Series Control Stations, DCI-16 and DCO-4 dry contact interfaces, DC-TIMER and RAU-96).

## General Information

WT Transformers are UL listed Class 2 wall transformers that provide power to the input devices on a system. Input devices are PS Series control stations, Patch Panels, DCI -16's, DCO-4's, DC-TIMER's and RAU-96's.

WT Transformers are available in 120VAC and 220VAC versions. They plug directly into any regular AC wall outlet. They provide 10VAC to the system.

The WT transformers connect to the system via the DB44 data and power hub. Please see DB44 spec for installation diagram and information.

WT10 provides up to 10VA.

Wt30 provides up to 30VA.
