SF804
8 Channel Super Fader and Speller $8 \times 4$ amp Outputs

## SF804-12/SF804-24/SF804-120/SF804-220

(SL804 Wiring Instructions Included)

DMX512 \& animation controls USER'S MANUAL

## General Description

The SF804 is an eight-channel single-phase AC lighting controller (Cross-Fader/Dimmer) capable of producing dazzling and spectacular light shows.
It consists of three circuit boards, the INT04 logic board, a slave INT-SL board with LED output emulators for circuits 5-8, and the LDM load driver module board. The INTO4 and LDM circuit boards are interconnected by a 10-conductor low-voltage cable (LVC). The INT04 and INT-SL are interconnected by a 6-conductor low-voltage cable (LVC2).
A functional block diagram of the SF804 is shown in Figure 1. The LDM board contains the equivalent of eight solid-state relays (SSR) The LDM is configured as two sets of four dimmers, with each set of four sharing one power line feed. Each relay/dimmer is rated at a maximum output current of 4 Amperes. The SSR relays are controlled by low-voltage DC signals from the INT04 SF logic board. These signals are optically-isolated by the LDM circuitry from all line voltage elements. The INT04 logic board contains a powerful microprocessor programmed to generate 16 user-selectable light sequences or patterns at an adjustable rate (the SF804 is also available with a "SPELLER" pattern or custom patterns upon request). A rotary selector on the INT04 is used to select the chase pattern and a second one is used to set the rate or chase speed. Patterns and speed can be monitored by eight LED's that represent the outputs of the SF804. The INT04 and INT-SL are mounted on the back of the front cover and derive their power from the 10 VAC step down transformer located on the LDM circuit board. All controls are accessible at the front panel. A single SF804 Master can drive an additional SL804-D-D slave in order to meet higher load requirements.
Please contact the factory for additional information by telephone 1-877-264-8391 or email info@digitallighting.com

## Table 1 - Terminals Definition

| NAME | DESCRIPTION |
| :--- | :--- |
| $\mathbf{1}$ | Output Of Solid-State Relay \#1 |
| $\mathbf{2}$ | Output Of Solid-State Relay \#2 |
| $\mathbf{3}$ | Output Of Solid-State Relay \#3 |
| $\mathbf{4}$ | Output Of Solid-State Relay \#4 |
| $\mathbf{5}$ | Output Of Solid-State Relay \#5 |
| $\mathbf{6}$ | Output Of Solid-State Relay \#6 |
| $\mathbf{7}$ | Output Of Solid-State Relay \#7 |
| $\mathbf{8}$ | Output Of Solid-State Relay \#8 |
| H1 | Hot Line Feed For Relays 1, 2, 3 \& 4 |
| H2 | Hot Line Feed For Relays 5, 6, 7 \& 8 |
| N1-N8 | Neutral Bus Connections. |

Table 2 - Absolute Maximum Electrical Ratings

| Electrical Characteristic T | Terminal Maximum |  |
| :---: | :---: | :---: |
| Relay Load Current | 1 to 8 | 4 Amps. |
| Input Current For Relays 1-4 | H1 | 20 Amps. |
| Input Current For Relays 5-8 | H2 | 20 Amps. |
| Input Voltage | $\mathrm{H} 1-\mathrm{H} 2$ | 240 VAC, 1-Phase. |

## NOTE

Line Inputs H 1 and H 2 must be on the same electrical phase.

Components Side
(INT-SL only has LED's to represents outputs 5 to 8 , there is no logic present on this unit)

Table 3 - INT04 Circuit Legend

## A- ENCLOSURE INSTALLATION

Install the SF804 enclosure in a well ventilated area where the ambient temperature will remain between $40^{\circ} \mathrm{F}$ and $104^{\circ} \mathrm{F}$ for full load operation. The enclosure location can be near the electric service panel or close to the loads, whichever is more convenient.

B- LINE VOLTAGE WIRING
(Please refer to Figures 5, 6 \& 7) All Line and Neutral wires must have adequate gauges to carry the load and the common currents.

## All wires must have Copper Conductors with $90^{\circ} \mathrm{C}$ Wire Insulation.

! Select two 20-Amp. breakers from the same 120 VAC phase in the service panel.
! Connect the above breakers to terminals $\mathrm{H} 1 \& \mathrm{H} 2$ respectively. If the total load does not exceed 16 Amps., a single breaker may be used and terminals $\mathrm{H} 1 \& \mathrm{H} 2$ may be jumpered together with a \#12 AWG wire.
! Connect 2 Neutral wires from the service panel to N3 \& N4 respectively.
! Bring a Common wire and a Return wire, from each of the loads to the SF804. A single Common wire may be used provided the wire gauge is adequate for carrying the required total load current.
! Connect the Common wires from load \#1 through load \#8 to any position on the Neutral Bus (N1 - N8).
! Connect the Return wires from load \#1 through load \#8 to terminals 1 through 8 respectively.

## C- MASTER-SLAVE SYSTEM WIRING

The SF804 can control an additional SL804-D slave. The slave contains the Load Driver Module (LDM) without the INT04 logic control board. This configuration is helpful when the load capacity of the SF804 master is exceeded and all loads must be synchronized together. The slave is daisy-chained to the master via two low-voltage 5-conductor cables (JJ88) provided by the factory. The SF804 and SL804D are wired identically.

## SF804-120 General Wiring Instructions for 120 V version.

## Wiring Notes

- DO NOT EXCEED 480 W (4 Amps. ) per circuit output @ 120VAC.
- SF804 cross-fader packs may be fed by one or two 20 A (maximum) branch circuits and may have up to eight separately dimmed loads.
$\square$ Loads connected to outputs must be dimmable.
$\square$ Both breakers must be on the same power phase.
- CAUTION: DO NOT attempt to parallel outputs to increase capacity.
- Installations must conform to local and/or NEC code requirements.
- Each load must have its own Neutral wire for full load operation.
- All line voltage wires must have copper conductors of adequate Gauge with $90^{\circ} \mathrm{C}$ wire insulation.
a POWER EACH LOAD DIRECTLY BEFORE CONNECTING IT TO THE SF804, TO ENSURE PROPER WIRING.
NOTE
The SL804-D output wiring is identical to the SF804. SL804-D slaves do not have the INT04 control board. The SL804-D Load Driver Board (LDM) does not have a transformer.
Figure 5 - SF804 Typical 120 VAC Wiring.

## SF804-220 General Wiring Instructions for 220/240V version.

## Wiring Notes

- DO NOT EXCEED 880W (4 Amps. ) per circuit output @ 220VAC (or 960W @ 220VAC).
- SF804 cross-fader packs may be fed by one or two 20 A (maximum) branch circuits and may have up to eight separately dimmed loads.
$\square$ Loads connected to outputs must be dimmable.
$\square$ Both breakers must be on the same power phase.
- CAUTION: DO NOT attempt to parallel outputs to increase capacity.
$\square$ Installations must conform to local and/or NEC code requirements.
- Each load must have its own Neutral wire for full load operation.
$\square$ All line voltage wires must have copper conductors of adequate Gauge with $90^{\circ} \mathrm{C}$ wire insulation.
- POWER EACH LOAD DIRECTLY BEFORE CONNECTING IT TO THE SF804, TO ENSURE PROPER WIRING.

## NOTE

The SL804-D output wiring is identical to the SF804. SL804-D slaves do not have the INT04 control board. The SL804-D Load Driver Board (LDM) does not have a transformer.

## Controls

The controls consist of two rotary 16-position (0-9 and A-F) selectors. S2 (Mode) is used for selecting the desired chase pattern. Positions $\mathbf{0}$ and $\mathbf{F}$ contain special patterns. The SF804 outputs can be turned to static $\mathbf{O N}$ by selecting $\mathbf{F}$. When $\mathbf{0}$ is selected, the SF804 goes into an automatic pattern change mode. All other positions cause the SF804 to play a single pattern indefinitely. S1 is used to select one of 16 individual chase rates (Rate). Minimum speed is achieved by selecting position 0 . Speed doubles with each subsequent selector position.

## Indicators

LED indicators 1 to 8 indicate the status (On-Off) of their corresponding outputs.

## LIMITED WARRANTY

Digital Lighting Systems, warrants to the purchaser that its products have been carefully manufactured and inspected and are warranted to be free from defects of workmanship and materials when used as intended. Any abuse or misuse contrary to normal operation shall void this warranty.

Digital Lighting Systems' obligation under this warranty shall be limited to replacement or repair of any units as shall within one year of date of invoice from Digital Lighting Systems, prove defective; and Digital Lighting Systems shall not be liable for any other damages, whether direct or consequential. The implied warranties of merchantability and fitness for a particular purpose are limited to the duration of the expressed warranty. Some states do not allow the exclusion of the limitation of incidental or consequential damages, so the above limitation or exclusion may not apply to you. This warranty gives you specific legal rights, you may also have other legal rights which vary from state to state.

Defective merchandise may be returned to Digital Lighting Systems, prepaid, after prior notification has been given and approval obtained for the return. To obtain prior approval for the return of the defective items, contact your local Digital Lighting Systems distributor, representative, or:

## Digital Lighting Systems, Inc.

Attn: Customer Service Department
12302 SW 128 ct
Miami, FL 33186
(305) 264-8391

Upon request, replacement unit(s) will be shipped as soon as available. Unless immediate shipment of replacement merchandise is requested, Digital Lighting Systems will not ship replacement merchandise until defective merchandise is received, inspected, and determined to be defective.

No labor charges in connection with warranty problems will be reimbursed by Digital Lighting Systems without prior written approval from the factory.

Digital Lighting Systems distributors and representatives have no authority to change this warranty without written permission.

Digital Lighting Systems reserves the right to determine the best method of correcting warranty problems.
