## Digital Lighting Systems, Inc.

## PD804-DMX

Eight Channel DMX Dimmer and Switch Packs

# USER'S MANUAL 

## GENERAL DESCRIPTIDN

The PD804-DMX is an 8-channel DMX-512 compatible dimmer pack. It contains three printed circuit boards, the load driver module (LDM) and two INT04 control modules. The LDM is equivalent to eight solid-state relays (SSR's) assembled on a single circuit board. Power is fed to the PD804-DMX from two 20 Amp. breakers on the same electrical phase. Each breaker feeds four relays and each relay is rated for a maximum output current of 4 amperes. The LDM is mounted at the bottom of the PD804-DMX's enclosure which also serves as a heat sink. The relays are triggered by low-voltage signals generated by the INT04 modules. These signals are optically-isolated by the LDM circuitry from all line voltage elements. A step-down 10 VAC- transformer on the LDM board supplies power to the INT04 modules.
DMX-512 control information is received by the INT04's over a shielded twisted-pair cable. Several PD804-DMX and/or PD408-DMX dimmer packs may be daisy-chained together using standard DMX cables with 5-pin XLR type connectors. Each PD804-DMX has two sets of address selectors which may be set to unique addresses and will occupy the next four DMX control channels beginning with the address selected at the front panel. When two or more units are set to the same address, their respective outputs work in unison, increasing the amount of load that can be controlled by a single DMX channel. Each of the PD804-DMX outputs may be independently configured not to dim. In such case, a DMX input value greater than 3 switches its respective output to $100 \%$, else the output remains at $0 \%$.
Figure 1 shows a functional block diagram of the PD804-DMX. Figure 2 shows a PD804-DMX and a PD408-DMX in a typical installation.

Table 1 - Terminals Definition

| NAME | DESCRIPTION |
| :--- | :--- |

## ENCLISURE INSTALLATIUN

Surface mount the dimmer pack in a well ventilated area where the ambient temperature does not exceed $90^{\circ} \mathrm{F}$ for full load operation. Allow 4 " of side clearance for proper air circulation. Installation clearance shall meet local and/or NEC code requirements. Enclosures may be attached to the wall or other mounting surface by holes in the heat sink flanges. Refer to the drawings above for the proper dimensions. Conduit shall be pulled to the top of the dimmer packs.

## NロTE

The PD804-DMX may create a slight buzzing noise and should not be located where this is objectionable.
7588 NW 8th Street, Miami, Fl. 33126 • Tel: 305-264-8391 or 1-877-264-8391 • Fax: 305-261-6637 pd804-dmx-um

## PD804-DMX General Wiring Instructions

## Wiring Nates

- DO NOT EXCEED 480 W (4 Amps. ) per dimmer output @ 120VAC.
$\square$ All wiring between the DMX control panel, dimmers, and other DMX equipment is low voltage (NEMA Class 2 ) and may be run with one shielded twisted pair \#18 AWG wire. Standard Industry DMX-512 compatible cables may be used.
- PD804-DMX dimmer packs may be fed by one or two 20 A (maximum) branch circuits and may have up to eight separately dimmed loads.
- Both breakers must be on the same power phase.
- CAUTION: DO NOT attempt to parallel outputs to increase capacity.
- Installations must conform to local and/or NEC code requirements.
- Each load must have its own Neutral wire for full load operation.
- All line voltage wires must have copper conductors of adequate Gauge with $90^{\circ} \mathrm{C}$ wire insulation.
- POWER EACH LOAD DIRECTLY BEFORE CONNECTING IT TO THE PD804-DMX, TO ENSURE PROPER WIRING.

Figure 4. PD804-DMX Typical 120 VAC Wiring.

## PD804-DMX-220 General Wiring Instructions

```
WIrING NatES
\square DO NOT EXCEED 960 Watts (4 Amps) per dimmer output at 240 VAC.
\squareAll wiring between the DMX control panel, dimmers, and other DMX equipment is low voltage (NEMA Class 2) and may be run with one
    shielded twisted pair #18 AWG wire. Standard Industry DMX-512 compatible cables may be used.
\square PD804-DMX dimmer packs may be fed by one or two 20 A (maximum) branch circuits and may have up to eight separately dimmed loads.
\square Both breakers must be on the same power phase.
\square CAUTION: DO NOT attempt to parallel outputs to increase capacity.
\square Installations must conform to local and/or NEC code requirements.
\square Each load must have its own Neutral wire for full load operation.
\square All line voltage wires must have copper conductors of adequate Gauge with }9\mp@subsup{0}{}{\circ}\textrm{C}\mathrm{ wire insulation.
\square POWER EACH LOAD DIRECTLY BEFORE CONNECTING IT TO THE PD804-DMX, TO INSURE PROPER WIRING.
```

NEUTRAL

PRIMARY

\#12 AWG copper conductor wire for Line \& Neutral Feeds. \#14 AWG copper conductors in/out to each load.
Max. Load per circuit : 4 Amperes ( 96 W at 24 VAC ).

## NOTES

1 With PD804-DMX-24 you may use a single 24 VAC-800 VA or better transformer or two separate 24 VAC-400 VA or better transformers.
2 With PD804-DMX-12 you may use a single 12 VAC-400 VA or better transformer or two separate 12 VAC-200 VA or better transformers.
3 Follow transformer's installation \& wiring instructions from manufacturer.
4 Maximum Load Per Output: 48 Watts at 12 VAC.
5 Maximum Load Per Output: 96 watts at 24 VAC.

## DMX ADDRESS SETTING

Up to 128 INT04-DMX boards (two in each PD804-DMX, one in each PD408-DMX) may be installed in any one system. Their DMX inputs should be daisy-chained using standard DMX-512 cables. Different addresses ranging from 1 to 509 may be selected for each dimmer, depending on which DMX channel(s) will be used to control it. Each INT04 uses four consecutive DMX bytes from the input stream beginning at the address selected using rotary selectors S1, S2 and address expansion jumper S3. (See Figure 3 on page 2 for selectors location).
The PD804-DMX is shipped from the factory with jumpers S3 installed allowing a DMX address range between 1 and 256 to be selected by S1 \& S2 (See Table 4). For higher addresses ( $257-509$ ) jumper S3 must be removed (See Table 5).

## Nan-DIM ロUTPUT SETTING

Any or all of the PD804-DMX outputs may be configured for non-dim (switch only) operation. This prevents inadvertent dimming, or damage, of loads that cannot be dimmed, such as contactors, mechanical relays, motors, non-dim fluorescent, etc...
Since this procedure involves adding external wire jumpers to the INT4 board, it is preferable to have it performed by the factory, at time of order. However, a qualified electronic technician can perform the procedure in the field when necessary. Figure 8 shows the location for installing the non-dim (ND) jumpers.
The numbers shown next to the ND jumpers represent the corresponding output number of the PD804-DMX. Installing an ND jumper makes the corresponding output non-dim (switch only). A DMX value greater than 3 turns a non-dim output to full intensity. A DMX value of 3 or less turns it fully off.

## PDBQ4-DMX INSTALLATION CHECK LIST

## BEFORE ENERGIZING THE PD804-DMX MAKE SURE:

- Loads are tested before connecting to dimmers.
- Breaker feed lines are on same electrical phase.
- PD804-DMX has been properly grounded.
- All line voltage screw terminals are properly tightened to prevent hot spots.
$\square$ Low voltage data lines connections are properly insulated.
- Low voltage data lines polarity is observed throughout the system.

Figure 7 - PD804-DMX Address \& Mode Selection.

## LIMITED WARRANTY

Digital Lighting Systems, warrants to the purchaser that its products have been carefully manufactured and inspected and are warranted to be free from defects of workmanship and materials when used as intended. Any abuse or misuse contrary to normal operation shall void this warranty.

Digital Lighting Systems' obligation under this warranty shall be limited to replacement or repair of any units as shall within two years of date of invoice from Digital Lighting Systems, prove defective; and Digital Lighting Systems shall not be liable for any other damages, whether direct or consequential. The implied warranties of merchantability and fitness for a particular purpose are limited to the duration of the expressed warranty. Some states do not allow the exclusion of the limitation of incidental or consequential damages, so the above limitation or exclusion may not apply to you. This warranty gives you specific legal rights, you may also have other legal rights which vary from state to state.

Defective merchandise may be returned to Digital Lighting Systems, prepaid, after prior notification has been given and approval obtained for the return. To obtain prior approval for the return of the defective items, contact your local Digital Lighting Systems distributor, representative, or:

Digital Lighting Systems, Inc.
Attn: Customer Service Department
7588 NW 8th Street
Miami, FL 33126
(305) 264-8391

Upon request, replacement unit(s) will be shipped as soon as available. Unless immediate shipment of replacement merchandise is requested, Digital Lighting Systems will not ship replacement merchandise until defective merchandise is received, inspected, and determined to be defective.

No labor charges in connection with warranty problems will be reimbursed by Digital Lighting Systems without prior written approval from the factory.

Digital Lighting Systems distributors and representatives have no authority to change this warranty without written permission.

Digital Lighting Systems reserves the right to determine the best method of correcting warranty problems.
